Re: Award of Contract
Road Materials, Cement Treated Base
05602-09

Public Works requests Commissioners' Court consideration and any action regarding the award of contract for road materials, cement treated base to TXI Operations, LP.

Cement treated base is a mixture of flex base material, 5.5% cement and water that is used to stabilize road repairs and drainage structure installations. Public Works has utilized this cement treated base for approximately 30 years.

The CTB is used in a variety of maintenance and road project applications. It is used to stabilize sub-grade under large pot holes, seal off up and downstream culvert ends to minimize erosion, sub-grade failures where ground water has caused road surface failures, and seal off small concrete failures at culverts, bridges, etc.

Public Works has budgeted for this procedure and has an FY2010 estimated proposed expenditure of $125,000.00.

Should you require additional information, please contact me and I will respond accordingly.
