

Create Additional Classroom At Educational Building

Purpose:

Enclose the unused space between two existing classrooms to increase indoor space available on rainy days and at maximum capacity. As we move from 300+ to the intended 500 participants additional indoor spaces will be needed.

Cost Estimate: \$175,000 - 1,400 sq. ft. @ \$125/sp.ft.
(Estimate from Bill Burke, Collin County)

Justification For:

- ✓ Create more indoor space for multiple group use, conference presentations and more breakout space for rainy days & nighttime programming.
- ✓ Provide each group with a quality experience that makes them feel like they are the only ones at camp, even though there may be two more events of the same type going on at camp for two other groups.
- ✓ Summer programming has need for additional classroom space all the time. Presently, they are moving beds out of cabins and the infirmary isolation rooms turning them into classroom spaces. Using cabin space in this way limits the number of children who can attend summer programs. As the population increases this won't even be an option.
