Thank you for your interest in Digital Intelligence computer forensic recovery devices. Our FRED™ systems are integrated forensic processing platforms capable of handling even the most challenging computer case. These professional forensic systems ship with the ability to duplicate evidence directly from hard drive to hard drive, CD-RW, DVD, Memory Cards, USB, FireWire, floppy, or tape storage devices and media.

FRED systems are the first and only systems designed from the ground up to meet the demands of computer forensic examiners and our company specializes in building and supporting computer forensic units. With the inclusion of our universal ventilated hard drive imaging shelf and UltraBay hardware write blocker these systems can handle digital evidence seized from 1.8", 2.5", 3.5", and even 5.25" SCSI, SATA and IDE hard drives and USB and FireWire mass storage devices in a secure write protected manner. Unlike other systems, digital evidence from memory cards such as SmartMedia, MultiMedia, Secure Digital media, Memory Stick, xD, and Compact Flash, may be duplicated and examined without the purchase of additional hardware or software. An additional feature exclusive to our systems is the ability, with the flip of a switch, to write-protect the floppy disk drive and examine data with the confidence that no data can be altered, destroyed or otherwise changed. **Digital Intelligence is the sole source for the FRED family of forensic computers and our forensic software suite.**

Additional information about our products can be found at our web site <http://www.digitalintelligence.com>. Thank you again for your interest and if you have any additional questions please don't hesitate to contact us.
