The solids portion of the mixture, when considered on the basis of "solids content," shall consist principally of hydrated lime of a quality and fineness sufficient to meet the following requirements as to chemical composition and residue.

4.14.2 Materials:

4.14.2.1 Chemical composition: The "solids content" of the lime slurry shall have a hydrate alkalinity Ca (OH), of not less than 90 percent by weight.

4.14.2.2 Residue: The percent by weight of residue retained in the "solid content" of lime slurry shall conform to the following requirements:

4.14.2.2.1 Residue retained on a No. 6 (3360 micron) sieve: None

4.14.2.2.2 Residue retained on a No. 10 (2500 micron) sieve: Max. 1 .0%

4.14.2.2.3 Residue retained on a No. 30 (590 micron) sieve: Max. 2.5%

4.14.2.3 Water: Type B, commercial lime slurry, shall conform to one of the following three grades:

4.14.2.3.2 Grade 2: The "dry solids contents" shall be at least 35 percent by weight of the slurry.

4.14.2.3.3 Grade 3: The "dry solids contents" shall be at least 46 percent by weight of the slurry.

4.14.3 Lime Treatment

4.14.3.1 Description: This item shall consist of treating subgrade, subbase, and base courses by the pulverization, addition of lime, and compacting the mixed material to the required maximum density. This item applies to natural ground, embankment, existing pavement, base or subbase courses placed under this contract, which shall be constructed as specified herein and in conformity with the typical section, lines and grades as shown on the plans.

4.14.3.2 Materials:

4.14.3.2.1 Base and Subbase Materials. Base and subbase materials shall meet the requirements shown on the plans or in the pertinent specifications.

4.14.3.2.2 Lime. The lime shall meet the requirements of Items 4.14.1 "Hydrated Lime," for the type of lime specified. When Type B, commercial lime slurry, is specified, the Contractor shall select, prior to construction, the grade to be used and shall notify the County in writing before changing from one grade to another.

4.14.3.2.3 If the minimum design strength or percent lime to be used for the treated subgrade, existing base, new subbase or new base is specified, it shall be determined by preliminary laboratory tests at the County's expense.

4.14.3.3 Equipment:

4.14.3.3.1 Requirements: Machinery, tools and equipment necessary for proper performance of the work shall be on the project and approved by the County prior to the beginning of construction operations. All machinery, tools and equipment used shall be maintained in a satisfactory and workmanlike manner.

4.14.3.3.2 Hydrated Lime: Hydrated lime shall be stored and handled in closed, weatherproof containers until immediately before distribution on the road. If storage bins are used, they shall be completely enclosed. Hydrated lime bags shall be stored in weatherproof buildings with adequate protection from ground dampness.

4.14.3.3.3 Trucks: If lime is furnished in trucks, each truck shall bear the weight of lime measured on certified scales, or the Contractor shall place a set of standard platform truck scales or hopper scales at a location approved by the County.

4.14.4 Construction Methods

4.14.4.1 General: It is a primary requirement of this section to secure a completed course of treated material containing a uniform lime mixture, free from loose or segregated areas, or uniform density and moisture content, well bound for its full depth, and with a smooth surface and suitable for placing subsequent courses. It shall be the responsibility of the Contractor to regulate the sequence of his work, to use the proper amount of lime, maintain the work and rework the courses as necessary to meet the above requirements.

Prior to beginning any lime treatment, the roadbed shall be constructed and shaped to conform to the typical sections, lines and grades as shown on the plans or as established by the County.

4.14.4.1.1 Treatment for Materials in Place: Materials to be treated shall be excavated to the secondary grade (proposed bottom of lime treatment) and removed or windrowed to expose the secondary grade. Any wet or unstable material below the secondary grade shall be corrected by scarifying, adding lime and compacting until it is of uniform stability. The excavated material shall then be spread to the desired cross section. If the Contractor elects to use a cutting or pulverizing machine that shall remove

the subgrade material accurately to the secondary grade and to pulverize the material at the same time, he shall not be required to expose the secondary grade or windrow the material.

However, the Contractor shall be required to roll the subgrade before using the pulverizing machine and correct any soft areas that this rolling may reveal. This method shall be permitted only where a machine is provided which shall insure that the material is cut uniformly to the proper depth and which has cutter that shall place the secondary grade to a smooth surface over the entire width of the cut. The machine shall be of such design that a visible indication is given at all times that the machine is cutting to the proper depth.

4.14.4.1.2 Application: Lime shall be spread only on that area where the first mixing operation can be completed in the same working day. The application and mixing of lime with the materials shall be accomplished by the method hereinafter described as "slurry placing," unless otherwise approved by the County.

4.1 4.4.1.2.1 Dry Placing: The lime shall be spread by an approved screw type spreader box or by bag distribution at the rate shown on the plans. The lime shall be distributed at a uniform rate and in such a manner as to reduce scattering of lime by wind to a minimum. Lime shall not be applied when wind conditions (in the opinion of the County) are such that blowing lime becomes objectionable to traffic or adjacent property owners. A motor grader shall not be used to spread lime. The material shall be sprinkled until proper moisture content has been secured.

4.14.4.1.2.2 Slurry Placing: Lime shall be mixed with water and applied as a thin water suspension or slurry. Type B, commercial lime slurry, shall be applied with a lime percentage not less than that applicable for the grade used. The distribution of lime at the rate shown on the plans shall be attained by successive passes over a measured surface of roadway until proper moisture and lime content have been secured.

4.14.4.1.2.3 Mixing: Mixing procedure shall be the same for "dry placing" or "slurry placing" as hereinafter described.

4.14.4.1.2.3.1 Treatment of Materials in Place. Material and lime shall be thoroughly mixed by approved road mixers or other approved equipment and the mixing continued until a homogeneous, friable mixture of material and lime is obtained, free from all clods or lumps. Materials

containing plastic clay or other materials which shall not readily mix with lime shall be mixed as thoroughly as possible at the time of the lime application, brought to the proper moisture content, sealed with a pneumatic roller, and left to cure one (1) to four (4) days as directed by the County. During the curing period, the material shall be kept moist. After the required curing time, the material shall be uniformly mixed by approved methods. If the soil binder lime mixture contains clods, they shall be reduced in size by raking, blading, discing, harrowing, scarifying or by other approved pulverization methods so that all non-slaking aggregates obtained on the No. 4 sieve are removed. The remainder of the material shall meet the following requirements when testing dry by laboratory sieves:

4.14.4.1.2.3.1.1 Minimum passing 1 %". (45 mm) 100%.

4.14.4.1.2.3.1.2 Minimum passing No. 4 sieve 60%.
If during the interval of time between application and mixing the hydrated lime has been exposed to the open air for a period of six (6) hours or more, or excessive loss has occurred due to washing or blowing, hydrated lime shall not be accepted for payment.

4.14.4.1.2.3.2 Treatment of New Material: The base or subbase material, lime and required water shall be thoroughly mixed and blended by approved road mixers or other approved equipment and the mixing continued until a homogeneous, friable mixture is obtained. When lime is placed as a slurry and mixed by the use of blades, the material shall be bladed as the lime-water mixture is applied. After the total amount has been placed, the mixture shall be thoroughly blended to the satisfaction of the County. If during the interval of time between application and mixing the hydrated lime has been exposed to the open air for a period of six (6) hours or more, or excessive loss has occurred due to washing or blowing, hydrated lime shall not be accepted for payment.

4.14.4.1.2.4 Compaction: Compaction of the mixture shall begin immediately after final mixing, and in no case later than 3 calendar days after final mixing. The material shall begin at the bottom and shall continue until the entire depth of the mixture is uniformly

compacted as shown on the plans or specified by the County. The compacted mixture shall have a uniform density of not less than 95 percent of the maximum density as determined by ASTM D698. Moisture content shall be within minus two (-2) to plus four (+4) of optimum. After each section is completed, such tests as are necessary shall be made by the County. If any portion fails to meet the density specified, it shall be reworked as necessary to obtain the specified density.

4.14.5 Finishing, Curing, and Preparation for Surfacing: After the mixture has been compacted, the surface shall be shaped to the required line, grades and cross sections and then thoroughly rolled sufficiently light to prevent hair cracking. The completed section shall then be moist-cured for a minimum of seven (7) days before further courses are added or any traffic permitted, unless otherwise directed by the County. In cases where Subgrade treatment or subbase sets up sufficiently to prevent objectionable damage from traffic, such layers may be opened to traffic two (2) days after compaction. The surface of the compacted layer shall be kept moist until covered by other base or paving material or application of a curing seal of emulsified asphalt.
