**Re:** Image Archive Solution

---

The Information Technology department requests Commissioner's Court authorization to advertise a request for proposals to provide the county with an image archive solution. The request is included in the approved FY15 budget.

The basis for action is that image related data growth has become too large to be included within the Avamar backup grid. Based on January 2014 statistics, image data comprises about 24.5TB of the total 62.5 TB within the production storage system. The County is seeking proposals to implement an image archival strategy to retain a copy of the production image data, stored in selected volumes of the production N6250 storage system, in a distinct digital archive which will allow those images to be removed from the Avamar backup solution.
