ATTACHMENT B

ATTACHMENT B: GLOSSARY OF TERMS

BROWNING: Is the discoloration of materials/surfaces caused by chemicals.

BLANCHING: Discoloration of tile caused by the over use of stripping solution leaching the color out of the surface. A general washed out look can be caused by excessive application of detergents on the basis of frequency, concentration or formulation.

BLOTCHING: Stains, marks, smears, smudges and blemishes. Blotching is usually caused by the failure to completely remove old, darkened finish.

BUFFER: A polishing implement covered with a soft material. A floor machine with a rotating disk ranging in speeds; Standard speed is 175 RPM, high speed 300-1000 RPM, ultra high speed 1000-2500 and mega high speed rotating at 6000 RPM. Disk with different pads, brushes or bonnets may be used on hard floors or carpet.

BUFFING: Is the polishing of a hard floor surface. Buffing extends the length of time between stripping or scrubbing. The friction used in buffing produces a hard clean top coat of finish.

BURNISHING: This process uses an ultra high speed floor machine to renew the floor surface by actually melting some of the floor finish. This process can be used as an over all floor care system when used with restoration chemicals. Burnishing can not be used on worn or uneven floors.

CURLING: The loosening of tiles caused by the excessive use of water remaining on the floor for an extended length of time. The use of improper chemicals such as strong caustic or alkaline solutions can cause tile to loosen and curl.

DISCOLORATION: To alter or distort the original color. This process can be caused by the over use or improper use of stripping solutions, detergents or other chemicals.

DISINFECTANT: A chemical agent that destroys disease-bearing microorganisms.

DISINFECTION: The reduction of potentially harmful bacteria. Kills 99,999 out of a 10,000 organisms considered harmful.

DUST MOP: A tool for sweeping a smooth, lightly soiled and dry floor. When properly treated and cared for the dust mop will remove soil from the floor without leaving a residue.

EYE LEVEL: Is the range from approximately the top of the head to the knees. The range seen by looking up and down while holding the head straight forward. Area and

objects in this range include, doors, door knobs, push plates, light switches, desk tops, counters, table tops, signs, chairs, settees, etc.

HORIZONTAL: Flat; parallel. Areas or objects that include desk tops, counters tops, table tops, file cabinet tops, etc.

LIQUID ENZYME: Any of numerous proteins or conjugated proteins produced by living organisms. A synergistic blend of cultured bacteria, enzymes, detergent, deodorizers and odor neutralizers that will digest, liquefy and clean organic waste, paper, detergent, grease, hair, fat and other waste.

LOOSENING: Damage to tile caused by excessive use of water and chemicals and/or allowing water and chemicals to remain on the floor for an extended period of time.

LOW LEVEL: The range from approximately the knees to the floor. Areas or objects that include chair legs, rungs, table legs, baseboards, etc.

MACHINE SCRUBBING: A process of removing soils, scuffs, and heel marks without removing all the layers of floor finish, avoiding the need to apply a sealer prior to applying fresh finish. This process includes the use of a rotary disk floor machine.

NEUTRAL CLEANER: A cleaner that contains neither free acid nor free (uncombined) alkali.

NEUTRALIZE: To make a solution chemically neutral. Example: Baking soda can neutralize battery acid.

NEUTRAL pH: Ranging on the pH scale between 0 (corrosive)-14 (caustic) 7 considered neutral.

ODOR NEUTRALIZER: The elimination of odor or eliminating bacteria the cause of offensive odor. Deodorizing is the masking of an offensive odor. Neutralization is the elimination of an offensive odor.

OVERHEAD: The range from approximately the top of the head to the ceiling. This area includes light fixtures, ventilation louvers, corners, door frames, etc.

PEELING: Should a surface coating be applied to thick peeling of that coating can occur. Floor surfaces not properly maintained can produce a peeling or flaking effect.

PILE: The fibers of the carpet or mat.

PILE LIFTING: A heavy duty vacuum designed to remove deep, embedded soil and to raise the carpet pile.

POLISH: The process of adding friction to obtain, brilliance, gloss, luster (buff). Also a chemical to add the same and to protect.

POLISHING: Floor polishing is obtained by the use of a floor machine, pad, spray buffing or rejuvenation product to produce a clean, hard, shinny, slip resistant floor. Wood polishing is obtained with the use of an oil base cleaner and a soft cloth. Metal polishing is obtained by the use of a soft cloth and an oil based cleaner. Writing surfaces are polished with a wax or silicone based cleaner.

POWDERING: Powdering represents the breaking down of the floor finish as a result of poor quality of floor finish or applying the finish to a surface that is not completely free of stripping solution.

SANITIZE: To eliminate, reduce, or maintain bacteria level at safe standards.

SOFTENING: Softening occurs when the floor finish is applied too thick or when the finish is applied to a floor that is not completely free of the stripping solution and the solution continues to work on the finish.

SPIN CLEANING: A surface cleaning method for carpets. Generally only removes approximately 1/4 inch of soiling. A low speed rotary floor machine and an absorbent cotton or synthetic emulsifying solution applied to the carpet to remove surface soil

SPLITCHING: White splitches caused by water typically occurs on floors which have been finished with an inferior floor product. This problem can be rectified by using a good quality finish and regular buffing. Dark splitches usually occur when finish is dripped on the floor and allowed to dry.

SWEEPING: The removal of loose soil, debris and litter.

STRIPPING: Stripping is the process by which old floor finish and seal is removed. A emulsifying solution is used. Because the process is very labor intensive and causes damage to the flooring surface it should be used when no easier solution is available.

SWIRLING: Swirling or swirl marks may appear in a floor when a poor quality floor finish is used or when the finish is applied too thick and leveling does not occur.

TACKINESS: This condition is caused if a poor quality finish is applied or if the finish is applied too thick. Improper cleaning, leaving a residue film can also cause tackiness.

VERTICAL: Flat; Upright. Surfaces such as walls, doors, blinds, sides of furnishings, etc.

WET EXTRACTION: Wet extraction/steam cleaning are two related methods of removing large amounts of dirt, residues, and moisture from carpets fibers. Wet extraction equipment cleans by injecting water and chemicals under pressure to rinse soil

and oily residue from carpet fibers. The soil and excessive soil and solutions are immediately removed by heavy duty vacuuming.

WET MOPPING: Removes lightly embedded soil and a small amount of floor finish depending on the chemicals used and the temperature of the water.

WET LOOK: The wet look is a highly polished floor that appears to be wet.

WETTING: Wetting is a term used to imply an excessive amount of water has been used to cause a loosening of the floor surface.

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Purpose of Form

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

- Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
- Certify that you are not subject to backup withholding, or
- Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income.

Note. If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

Definition of a U.S. person. For federal tax purposes, you are considered a U.S. person if you are:

- An individual who is a U.S. citizen or U.S. resident alien,
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States,
- An estate (other than a foreign estate), or
- A domestic trust (as defined in Regulations section 301.7701-7).

Special rules for partnerships. Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. Further, in certain cases where a Form W-9 has not been received, a partnership is required to presume that a partner is a foreign person, and pay the withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid withholding on your share of partnership income.
