Securing reliable and affordable emulsion suppliers is paramount to PW's road reconstruction and maintenance activities. Comprised primarily of water and asphalt, the emulsion's principal purpose is to seal the road base from water penetration. Once applied, the water will evaporate leaving a strong, adhesive bond. Emulsions are available in many varieties, each with unique characteristics to address specific needs. PW utilizes asphalt emulsions for such tasks as Dust Control, Priming Roads for 2-Course pavement, and many other applications.

Public Works requests Commissioners' Court consideration and approval to award the contract for Road Materials, Emulsified Asphalt, IFB 08365-12 as outlined above.
