The contract is performable in Collin County, Texas.

2.23 The Vendor/Contractor/Provider shall not sell, assign, transfer or convey the contract, in whole or in part, without the prior written approval from Collin County.

2.24 The apparent silence of any part of the specification as to any detail or to the apparent omission from it of a detailed description concerning any point, shall be regarded as meaning that only the best commercial practices are to prevail. 4.12 Specifications: The intended purpose of this Invitation for Bid is to define the materials and application of Type I Portland Cement.

4.12.1 Cement Treatment

4.12.1.1 Description: This item shall consist of treating subgrade, sub base, and base courses by the pulverization, addition of cement, and compacting the mixed material to the required maximum density. This item applies to natural ground, embankment, existing pavement, base or sub base courses placed under this contract, which shall be constructed as specified herein and in conformity with the typical section, lines and grades as shown on the plans.

4.12.1.2 Materials:

4.12.1.2.1 Base and Sub-base Materials. Base and sub base materials shall meet the requirements shown on the plans or in the pertinent specifications.

4.12.1.2.2 Cement. Furnish hydraulic cement that meets the requirements of DMS-4600, "Hydraulic Cement," and the Department's Hydraulic Cement Quality Monitoring Program (HCQMP). Sources not on the HCQMP will require testing and approval before use.

4.12.1.2.3 If the minimum design strength or percent cement to be used for the treated subgrade, existing base, new sub base or new base is specified, it shall be determined by preliminary laboratory tests at the County's expense.

4.12.1.2.4 Water: Furnish water free of industrial waste and other objectionable material.

4.12.1.3 Equipment:

4.12.1.3.1 Requirements: Machinery, tools and equipment necessary for proper performance of the work shall be on the project and approved by the County prior to the beginning of construction operations. All

machinery, tools and equipment used shall be maintained in a satisfactory and workmanlike manner.

4.12.1.3.2 Cement Spreading Equipment: Bulk cement spreader capable of applying the dry cement in a measured amount evenly across the roadway or project area.

4.12.1.3.3 Pulverization Equipment: Provide pulverization equipment that cuts and pulverizes material uniformly to the proper depth with cutters that will plane to a uniform surface over the entire width of the cut, provides a visible indication of the depth of cut at all times, and uniformly mixes the materials.

4.12.1.3.4 Trucks: If cement is furnished in trucks, each truck shall bear the weight of cement measured on certified scales, or the Contractor shall place a set of standard platform truck scales or hopper scales at a location approved by the County.

4.12.2 Construction Methods

4.12.2.1 General: It is a primary requirement of this section to secure a completed course of treated material containing a uniform cement mixture, free from loose or segregated areas, or uniform density and moisture content, well bound for its full depth, and with a smooth surface and suitable for placing subsequent courses. It shall be the responsibility of the Contractor to regulate the sequence of his work, to use the proper amount of cement, maintain the work and rework the courses as necessary to meet the above requirements.

Prior to beginning any cement treatment, the roadbed shall be constructed and shaped to conform to the typical sections, lines and grades as shown on the plans or as established by the County.

4.12.2.1.1 Treatment for Materials in Place: Materials to be treated shall be excavated to the secondary grade (proposed bottom of cement treatment) and removed or windrowed to expose the secondary grade. Any wet or unstable material below the secondary grade shall be corrected by scarifying, adding cement and compacting until it is of uniform stability. The excavated material shall then be spread to the desired cross section. If the Contractor elects to use a cutting or pulverizing machine that shall remove the subgrade material accurately to the secondary grade and to pulverize the material at the same time, he shall not be required to expose the secondary grade or windrow the material.

However, the Contractor shall be required to roll the subgrade before using the pulverizing machine and correct any soft areas that this rolling

may reveal. This method shall be permitted only where a machine is provided which shall insure that the material is cut uniformly to the proper depth and which has cutter that shall place the secondary grade to a smooth surface over the entire width of the cut. The machine shall be of such design that a visible indication is given at all times that the machine is cutting to the proper depth.

4.12.2.1.2 Application: The application and mixing of cement with the materials shall be accomplished by the method hereinafter described as "dry placing," unless otherwise approved by the County. Add cement at the percentage determined by the mix design. Apply cement only on an area where mixing, compacting, and finishing can be completed during the same working day. Start cement application only when the air temperature is at least 35°F and rising or is at least 40°F. The temperature will be taken in the shade and away from artificial heat. Suspend application when the County determines that weather conditions are unsuitable.

4.12.2.1.2.1 Dry Placing: The cement shall be spread by an approved screw type spreader box or by bag distribution at the rate shown on the plans. The cement shall be distributed at a uniform rate and in such a manner as to reduce scattering of cement by wind to a minimum. Cement shall not be applied when wind conditions (in the opinion of the County) are such that blowing cement becomes objectionable to traffic or adjacent property owners. A motor grader shall not be used to spread cement. The material shall be sprinkled until proper moisture content has been secured.

4.12.2.1.2.2 Slurry Placing: Cement shall be mixed with water and applied as a thin water suspension or slurry. Cement shall be applied with a cement percentage not less than that applicable for the grade used. The distribution of cement at the rate shown on the plans shall be attained by successive passes over a measured surface of roadway until proper moisture and cement content have been secured.

4.12.2.1.2.3 Mixing: Mixing procedure shall be the same for "dry placing" or "slurry placing" as hereinafter described.

4.12.2.1.2.3.1 Treatment of Materials in Place. Material and cement shall be thoroughly mixed by approved road mixers or other approved equipment and the mixing continued until a homogeneous, friable mixture of material and cement is obtained, free from all clods or lumps. Materials containing

plastic clay or other materials which shall not readily mix with cement shall be mixed as thoroughly as possible at the time of the cement application, brought to the proper moisture content, sealed with a pneumatic roller, and left to cure one (1) to four (4) days as directed by the County. During the curing period, the material shall be kept moist. After the required curing time, the material shall be uniformly mixed by approved methods. If the soil binder cement mixture contains clods, they shall be reduced in size by raking, blading, discing, harrowing, scarifying or by other approved pulverization methods so that all non-slaking aggregates obtained on the No. 4 sieve are removed. The remainder of the material shall meet the following requirements when testing dry by laboratory sieves:

4.12.2.1.2.3.1.1 Minimum passing 1 %". (45 mm) 100%.

4.12.2.1.2.3.1.2 Minimum passing No. 4 sieve 60%.
If during the interval of time between application and mixing the cement has been exposed to the open air for a period of six (6) hours or more, or excessive loss has occurred due to washing or blowing, cement shall not be accepted for payment.

4.12.2.1.2.3.2 Treatment of New Material: The base or sub base material, cement and required water shall be thoroughly mixed and blended by approved road mixers or other approved equipment and the mixing continued until a homogeneous, friable mixture is obtained. When cement is placed as a slurry and mixed by the use of blades, the material shall be bladed as the cement-water mixture is applied. After the total amount has been placed, the mixture shall be thoroughly blended to the satisfaction of the County. If during the interval of time between application and mixing the cement has been exposed to the open air for a period of six (6) hours or more, or excessive loss has occurred due to washing or blowing, cement shall not be accepted for payment.

4.12.2.1.2.4 Compaction: Compaction of the mixture shall begin immediately after final mixing, and in no case later than 3 calendar days after final mixing. The material shall begin at the bottom and shall continue until the entire depth of the mixture is uniformly compacted as shown on the plans or specified by the County. The

compacted mixture shall have a uniform density of not less than 95 percent of the maximum density as determined by ASTM D698. Moisture content shall be within minus two (-2) to plus four (+4) of optimum. After each section is completed, such tests as are necessary shall be made by the County. If any portion fails to meet the density specified, it shall be reworked as necessary to obtain the specified density.

4.12.3 Finishing, Curing, and Preparation for Surfacing: After the mixture has been compacted, the surface shall be shaped to the required line, grades and cross sections and then thoroughly rolled sufficiently light to prevent hair cracking. The completed section shall then be moist-cured for a minimum of seven (7) days before further courses are added or any traffic permitted, unless otherwise directed by the County. In cases where Subgrade treatment or sub base sets up sufficiently to prevent objectionable damage from traffic, such layers may be opened to traffic two (2) days after compaction. The surface of the compacted layer shall be kept moist until covered by other base or paving material or application of a curing seal of emulsified asphalt. If a curing seal is used, it should be applied as soon as possible after completion of final rolling, at a rate of between 0.10 and 0.20 gallons per square yard (0.5 and 1.0 liters per m²), the exact rate to be determined by the County. Collin County will not permit any equipment or traffic on any road during the application process.

4.12.4 Maintenance: The Contractor shall be required to maintain the completed soil cement base for one year from completion of the project. All irregularities or other defects that may occur shall be immediately repaired by the Contractor at his own expense. Repairs are to be made as directed by the County and in a manner to insure restoration of a uniform surface and durability of the portion repaired.

4.12.5 Testing and Inspection: All in place cement shall be tested and/or inspected by an independent certified geotechnical laboratory as approved by Collin County prior to payment. All testing and/or inspection shall be coordinated by Collin County's field representative.

4.12.6 Measurement and Payment: Cement processing shall be measured for payment in square yards (m²) for the thickness shown in the plans for the surface area of completed and accepted work. The measurement for cement shall be by the ton of 2,000 pounds (900 kg) dry weight. Cement treatment shall be paid for at the contract unit price per ton, as provided in the awarded contract. The contract unit price shall be the total compensation for preparing the roadbed; for loosening, pulverizing, application of cement, water content in the slurry mixture and the mixing water; mixing, shaping, sprinkling, compacting, finishing, curing and maintaining; for manipulations required; and for all labor, equipment, fuels, tools and incidentals necessary to complete the work, all in accordance with the plans and specifications. Cement material measured as provided in this item shall be paid for at the unit price bid for "cement material" which price shall be full compensation for furnishing the material; for all freight involved; for

all unloading, storing, and handling; and for all labor, equipment, fuels, tools and incidentals necessary to complete the work.

4.12.7 Traffic Control: Collin County will provide minimum road project Barricades/signs. Contractor shall supply additional traffic control required to maintain safe traffic flow (i.e. flagmen, folding barricades, etc.).

4.12.8 Driveway Access: During construction, Contractor shall maintain access for ingress, egress to all existing driveways. Collin County will furnish driveway materials.

Purpose of Form

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

1. Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
2. Certify that you are not subject to backup withholding, or
3. Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income.

Note. If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

Special rules for partnerships. Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. Further, in certain cases where a Form W-9 has not been received, a partnership is required to presume that a partner is a foreign person, and pay the withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid withholding on your share of partnership income.
