3. PRODUCT DESCRIPTION

Basic Description: For exterior and interior wall systems. Provide integral color and surfaces similar to smooth stone, granite or glazed tile surfaces. Used for load-bearing and non-load-bearing walls. Can be erected in one operation without back-up units, at considerable cost savings. Used in interior and exterior construction of low-rise and high-rise buildings, offices, residential condominiums, shopping malls, universities, government and military projects, food and beverages processing plants, industrial and commercial facilities, high school, extended care facilities, hospitals,

water treatment plants, transportation facilities, prisons, medical buildings, residential construction . . . wherever a smooth, hard, sealed, glazed or stone-like permanently adhered sanitary, decorative or creative finish is required in white, cream, earthtones or colors.

Composition: SPECTRA-GLAZE® II Compound made with S-G® Polymer is furnished by Spectra Industries, Inc. along with other components as may be required to exceed ASTM C 744, BRC standards and other SPECTRA-GLAZE® Block performance and test standards. Compound and technology are only available to licensed manufacturers. The Facing (up to 1/8" thick) is factory applied to each block and becomes integral with the concrete, transforming the irregular gray concrete block into a finished wall surface.

Sizes and Shapes: All dimensions of the glazed unit are modular. The facing dimensions are 7 3/4" x 15 3/4". There is a 1/16" lip (± 1/32") running around the perimeter of the 7 3/4" x 15 3/4" modular block. The glazed surface can therefore be laid with a 1/4" exposed mortar joint in regular 8" coursing, subject to adjustment for tolerances. Units available in nominal 2, 4, 6, 8, 10, 12" thickness, standard block heights and shapes. Units supplied will be two or three core, open or closed end, depending upon local block practices. A line of various shapes is furnished with basic units including stretcher, jamb, cap and cove base units. Units are available prefaced both sides.

Appearance: SPECTRA-GLAZE® units are available in their own unique range of standard and custom colors, scale and sculptured faces—not available in natural stone, brick and marble. Creams, white, grays, tans, and heather and pastels provide an aged beauty and natural look that is a pleasing alternative to limestone, synthetic stone, marble, slate, brick, glass, high-grade paint, stucco and ground face stones at a fraction of the cost. As with all products made using naturally occurring mined materials, attractive and characteristic ranges

Build and Finish in one operation with SPECTRA-GLAZE® Units

Available in most standard shapes. Consult your nearest representative for precise shapes, sizes and configurations.

With SPECTRA-GLAZE® thru-wall units, glazed walls lay up in one operation, thereby eliminating a second scaffold.

SPECTRA-GLAZE® II masonry walls provide high performance fire ratings.

Double-Glazed Units permit construction and finish of two-faced walls in a single operation. Dimensional tolerance approx. ± 3/16", or per local manufacturer. May be subject to slight size variation in raw substrate block. Consult local manufacturer.

exist which enhance and add interest to the appearance of the walls.

With exterior use, the initial wall surface is enhanced by weathering, which brings out the natural beauty of the composite silica dioxide surface. The silica dioxide material is an extremely hard, abrasion resist-

ant mineral carefully selected for SPECTRA-GLAZE® glazings and mined from deposits formed millions of years ago by the ice age. This is integral in the face.

Inquire for detailed results of South Florida exposure and BRC Tests for UV. For most colors, change has been found to be minimal when rated in accordance with ASTM standards for glazed concrete block.

Color Fastness: The product has built-in light fastness and color change has been found to be minimal in South Florida field testing and in laboratory accelerated testing. It is also highly impervious to acid rain.

As with most materials, proper use, design and detailing are prerequisites. All colors show some slight change under continuous exterior exposure. As with other exterior materials, some gradual and uniform weathering is expected. Consult the local manufacturer plant or sales office for recommendations and performance data.

Color Range: Standard and Designer Colors are available ranging across the spectrum, including pastels, related deep tones, creams, white, heather and neutrals. VARI-TONE® Series earthtone finishes provide both a surprisingly similar appearance and economical and attractive alternative to natural materials such as granite, stone, marble, etc. Double-glazed units may be furnished with each face a different color. Other colors can be matched upon request.

Texture and Scale: SPECTRA-GLAZED® II Design Series and Scored Series units offer a wide selection of texture, scale and pattern. Design Series includes various rectilinear and curvilinear face designs in standard sizes. Scored Series provides the choice of reduced scale and pattern with economy of large 8 x 16 block, e.g., 8 x 8 score (DA1), 5 x 8 score (DA5), 4 x 8 score (DA2), and brick score (DA3). Other scores may be furnished on request. Score shall be 1/8" deep, but consult local manufacturing plant for precise specification.

Finish: At the time of delivery the product shall be free from chips, cracks, and pinholes in the finish wall when viewed at a distance of 5', at right angles to the wall. Manufacturer's patching compound may be used by the contractor or seller to correct minor job site damage or imperfections.

Integral Bond: The finished facing is manufactured as a permanent part of the block. The molded finish penetrates deep into the pores of the block and is heat treat-

ed for durability. It becomes an integral part of the unit that cannot be removed without destroying the concrete itself.

Grade: SPECTRA-GLAZE® II prefaced concrete masonry units are not graded. Units furnished to the project must meet Licensor's manufacturing tolerances and quality control standards, subject to sale terms and warranty terms of supplying licensed manufacture.

Intended Use: Standard construction detailing including dry construction, moisture and water protection, water stops, weep holes, elastic and durable mortar, flexible caulking of horizontal joints, metal or precast concrete caps, flexible control joints and drainage overhangs are a prerequisite of good design and proper use. Exterior walls must be pointed with S-G Sup'r Grout™, Hydroment grout or equivalent. Durable exterior wing walls require weep holes and S-G Joint Seal™ Epoxy mortar thru-the-wall or equivalent, with horizontal joints and return edges raked and pointed with flexible exterior grade urethane or other durable caulk. Water proof flashing should be used under all capping. The preferred system is to cap off exterior walls with water proof flashing covered by precast slabs, metal capping or stone caps. This approach provides good structural design since it minimizes the number of horizontal cap joints that will be exposed to freeze thaw and stress from wall movement. Vertical expansion should also be used.

4. TECHNICAL DATA

SPECTRA-GLAZE® units are manufactured to meet and exceed published specifications for glazed masonry. The outstanding performance is documented by periodic testing from leading independent laboratories such as Froehling & Robertson (F&R), Materials Eng. & Testing, Penniman & Brown (P&B), Southwest Research Institute, U.S. Testing, Radiation Technology, South Fla. Testing, Underwriters Labs of Can., Warrington Research Ctr., BRC Scan Testing and other laboratories. Copies of all test reports are available upon request. The following results represent performance characteristics that are outlined by ASTM specifications or are developed by Spectra Industries Inc. and its licensors to provide test data of other unique qualities of this glazed surface that may be desirable in different design applications. Distortion Tolerance: $\pm \frac{1}{16}$ ".

ASTM C 744

5. INSTALLATION

Preparatory Work: Prior to the placing of units on the project, a properly protected sample panel at least 4' x 4' should be erected at the job site for each color selected, and include all block types and

sizes to be used in that color to show approved appearance, color and range.

SPECTRA-GLAZE® masonry units are manufactured using patented technology that ensures consistent dimensional integrity within tolerances defined by ASTM C 744 for the glazed surface and ASTM C 90 for the concrete masonry units.

As measured from the points described on the attached schematic, (Figure 1) the glazed surface has a maximum allowable variation of $\frac{1}{16}$ " documented by Paragraphs 5.1 and 5.2 of ASTM C 744. The concrete masonry unit is manufactured to be within the dimensional tolerance of $\frac{1}{8}$ " defined in Paragraph 6.1 of ASTM C 90.

Method:

a) SPECTRA-GLAZE® masonry units will be delivered to job site palletized. Units shall be stored as near as possible to their final position in the wall. SPECTRA-GLAZE® masonry units are to be stored on level ground and are to be provided with a tarpaulin or similar, as protection from the weather. Do not double stack pallets of SPECTRA-GLAZE® units. Claims for chipped or damaged block will not be allowed if stacking of pallets has occurred. Each unit is protected by layer separators to prevent damage in transit and on the job site. This cover and any individual cardboard covers are to be retained until the block is to be placed in the wall. Blocks are to be handled carefully. At minimum, follow job handling and protection specified in Fed. Spec. SS-C-621 b, Form B for construction site procedures.

b) Prior to beginning installation, all units should be inspected for conformance to manufacturer's specifications. Damaged or non-conforming units must not be installed and shall be available for inspection by manufacturer. Replace any units damaged by contractor at contractor's expense. All damaged units not reported as damaged upon inspection at time of delivery are presumed to have been damaged by contractor or improper job site handling. Contractor, at his expense, shall remove any scratches caused by mishandling using S-G Kleen 'n' Shine™ or other repair material. Any defected units installed are the responsibility of the contractor.

c) SPECTRA-GLAZE® units are to be installed using the glazed surface as the guide and allowing for $\frac{1}{4}$ " apparent mortar joint per attached schematic. (Figure 1). If installed following the schematic diagram, the lip of the unit is hidden

by the mortar joint. The lip of a SPECTRA-GLAZE® unit does not define the face thickness, but is the function of the manufacturing process. It is essential, in order to maintain the quality of the finished wall, that all faces are laid even. Wherever possible, dry positioning should be employed by the contractor in order to satisfy himself that the required tolerances remain.

d) Where SPECTRA-GLAZE® units are specified to be scored it is recommended that when stack bond appearance is selected, use stack bond construction. All structural joints should be raked back at least $\frac{1}{8}$ " and allowed to set. Tuckpoint raked joints and scored joints at the same time. Other scores may be customized to your design.

e) For corner conditions use the *People Friendly™ Corners* (F-Series). Soft corners, standard bullnose or square corners. Factory-cut miter may be used for irregular returns.

f) Where SPECTRA-GLAZE® units are to be cut to fit on the job site, a power-driven masonry saw, i.e. Clipper saw, is to be used. Units should not be cut by hand.

g) SPECTRA-GLAZE® block joints can be tooled or raked and pointed with a specified mortar material. All exterior joints must be filled and struck to protect the wall from the elements. Raked joints or bare scores should not be used on the exterior.

h) For adequate water control, use large weep vents at least 4" long in vertical joint for every second block in exterior base and foundation—as with normal good construction design and installation to prevent water penetration. Also, use immediately above all flashing, bond beam, solid filled or other water stop locations in the wall. Continuous

Figure 1.

*Dimensions are nominal and may vary in field installation. Joints should be struck with $\frac{3}{16}$ " tool, or larger. Joint should be approximately $\frac{1}{4}$ ". It may appear to be slightly wider than $\frac{1}{4}$ " due to feathering at radius of edge or field adjustment in aligning concrete masonry units.

metal capping, stone, or precast slab plus the highest quality flashing and adequate overhangs are require to cap off an exterior SPECTRA-GLAZE® masonry wall. Metal capping should have at least a 4" overhang. Mortar used in capping should be impervious to water penetration and freeze/thaw. All exterior joints must be full and struck, never left raked. All laying mortar should contain appropriate water-repelling additives to insure water-proof mortar joints and good adhesion. Exposed mortar joints are raked back 1/4" and tuck-pointed with epoxy mortar or other similar water-proof joint system.

Sample panels should be erected to reflect exterior specifications prior to authorizing final construction.

i) For maximum exterior shine, mortar and color enhancement, apply S-G Kleen 'n' Shine in accordance with supplier's instructions.

j) As work progresses, all units should be cleaned to remove excess mortar, mortar lumps and other materials with clean rags. Prevent mortar from hardening on the face by promptly cleaning wall sections as they are installed. Use soft, clean rag with masonry detergent such as the SPECTRA line of masonry cleaners, Vanitrol, SureClean 600, or Deox in accordance with the manufacturer's instructions. Do not use acid, steel wool, or other abrasives. Rinse well and wipe dry.

Building Codes: SPECTRA-GLAZE® II pre-faced concrete masonry units are acceptable in all national building codes where concrete masonry units are accepted.

Jurisdiction: SPECTRA-GLAZE® II pre-faced concrete masonry units are installed by masons.
